

Curriculum vitae Testa Antonino

PERSONAL INFORMATION

Testa Antonino

Researcher unique identifiers: <https://orcid.org/0000-0003-3983-2448>; H-6864-2012

Nationality: Italian

EDUCATION

1999 **PhD in Plant Pathology**, Faculty of Agricultural Science, University of Naples Federico II, Italy

CURRENT POSITION

2022 – **Associate professor** in Plant Pathology, Department of Agricultural Science, University of Naples Federico II, Italy

2020 – **Associated** at the Institute for Sustainable Plant Protection, National Research Council, Portici, Naples, Italy

PREVIOUS POSITIONS

2007 – 2022 Position held: **Aggregate professor** in Plant Pathology, Department of Agricultural Science, University of Naples Federico II, Italy

2004 – 2007 Position held: Researcher/Lecturer at Italian Ministry of University and of Scientific and Technological Research “Incentive for the return of scientists from abroad to Italy - **Return of the Brains**” at Institute of Biochemical Biotechnology, Polytechnic University of Marches, Ancona, Italy.

1999 – 2003 Position held: **Post-Doctoral Researcher**, Department of Plant Pathology, “The Ohio State University”, Columbus, OH, USA

1993 – 1994 Position held: Army Second Lieutenant, Engineers Corp, Ministry of Defence, Italy.

FELLOWSHIPS

2016 Award received from the President of the Italian Republic, distinction of “Knight of Order of Merit of the Italian Republic”, in recognition of the technical-scientific support to members of the Environment Commission of the Senate of the Republic.

2003 Research Fellow, Dept. of Agricultural Biotechnology University of Firenze

2003 Award received from Scientific board of the "Third European Symposium on Aerobiology", Worcester UK, 30 August - 4 September 2003

1995 – 1999 Scholarship, Research Doctorate in Plant Pathology (XI series), University of Naples Federico II, Italy

• ORGANISATION OF SCIENTIFIC MEETINGS

Chairman, Scientific committee, *Phytophthora* Molecular Genetic Symposium: Beyond Y2K, Wooster OH, USA 13-14 November 1999;

Scientific committee, OARDC Annual Conference 2000 Biotechnological, Agricultural and Land Grand University Wooster OH, USA, 27 April 2000;

Scientific committee, Oomycete Genetics 2001 Wooster OH, USA, 16-17 July 2001;

Scientific coordinator, Conference of Biotechnology and Bioremediation. Italian Institute for Philosophical Studies, Palazzo Serra di Cassano Napoli. 07 December 2013;

Scientific coordinator, Workshop Biotechnology and soil recovery. Roma, Senate of Italian Republic, 7 February 2014;

Scientific committee, Advanced Research in Scientific Areas - ARSA 2015, November 9-13;

Scientific committee, The 4th International Global Virtual Conference - GV 2016, April 18-22;

Scientific committee, The 6th QUAESTI Scientific Conference - Multidisciplinary Studies and Approaches. December 10-15, 2018

INSTITUTIONAL RESPONSIBILITIES

2014 – current Faculty at the Department of Agricultural Sciences, University of Naples Federico II, Italy.

2007 – 2014 Member of Board of International PhD in Environmental Resource Sciences, Doctorate School in Agricultural and Agri-food Sciences, University of Naples Federico II, Italy, and Universidad de La Frontera, Temuco, Chile.

2007 – 2014 Faculty and Graduate Student Advisor at the School of Biotechnological Sciences, University of Naples Federico II, Italy.

| Vineyards management strategy led by data analysis | Bilateral agreement University of Naples Federico II - University San Juan Bautista, Lima, Perú | 9000 | 2019-2023 | Team Member |

Track-record

Professor Testa began his academic career as post-Doctoral researcher at Department of Plant Pathology “The Ohio State University”, USA, in November 1999, department chairperson Prof. Randall C. Rowe. During the academic year 2001-2002, as **foreign Lecturer**, he held a course of “Molecular biology applied to the phytosanitary management of agricultural crops” Faculty of Agriculture, University of Ancona. From this experience derived a Research and Teaching position at the Institute of Biochemical Biotechnology, “Polytechnic University of Marches”, director Prof. Giulio Magni. Position funded by a grant from the Italian Ministry of University and of Scientific and Technological Research “Incentive for the return of scientists from abroad to Italy - **Return of the Brains**”.

In 2007, as a result of a public competitive exam, he became **faculty**, permanent position, at School of Biotechnological Sciences, University of Naples Federico II.

Microbiological and molecular characterization of oomycetes and fungi pathogens on crop and woody plants in natural ecosystems represent the continuous scientific activity. Parasites present in the Centre-South of Italy are characterized based on their sexual compatibility, resistance to fungicides, race composition, interaction with the different hosts. Characterization is completed by molecular techniques based on fingerprinting techniques.

The gene expression is analyzed by attempting to elucidate the host/nonhost-parasitic interaction through the study of the transcriptome in the *Phytophthora* spp.-plant (Tomato, Potato and *Nicotiana* spp) systems. This study reviled the existence in *P. infestans* of five genes able to induce hypersensitivity responses when expressed in plants. Three of these genes do not have any homologue in the databank. Their *in vivo* activity was evaluated through the study of the Pathogenesis Related-protein (PR) induction, Hypersensitive Response (HR) markers and the modification of host susceptibility.

Fluorescent strains and mathematical models have been used in a novel technique for building models, that describe the rain action on plant pathogens dispersion.

Proteins, enzymes and genes involved in the host- pathogen recognition, are studied to detect active molecules in the host-pathogen recognition process, particularly in Oomycetes of the genus *Phytophthora*. The activity of native and transformed proteins are evaluated on host and non-host plants and the induced responses are characterized.

The sequencing of complete genomes and databases (EST), allowing the computer analysis to search for specific sequences tools are used to identify molecular markers (Simple Sequence Repeat) for innovative population studies.

Naturally selected microorganisms are identified in contaminated soils and characterized specifically with respect to storage and degradation capacity of organic molecules and metal pollutants. In order to know the impact of organic and inorganic xenobiotics present or released into the environment and the effect on the quality of soils and therefore of present and future crops, biological indicators assessed.

The fate of these xenobiotics in contaminated soils of the Campania region are reconstructed on a laboratory scale using well-characterized agricultural soils contaminated by compounds recalcitrant to natural degradation processes, such as polycyclic aromatic hydrocarbons and polychlorophenols, and some metals with significant environmental impact. The processing capacity of these substances by naturally selected microorganisms on contaminated substrates or allochthonous microorganisms with known degradation capacity is consequently evaluated.
